Real-time PCR Kit

Catalog No. PG-30009

Quantity: 50 reactions

Reaction volume: 25 μ l/reaction

Application

For quantitative, real-time PCR and two-step RT-PCR using sequence-specific probes. The real-time PCR Kit provides accurate real-time quantification of DNA and cDNA targets in an easy-to-handle format. The kit is suitable for use in PCR and two-step RT-PCR following reverse transcription. The ROX fluorescent dye included in the master mix serves as an internal reference for normalization of the fluorescent signal when carrying out reactions using the ABI Sequence Detection Systems.

Kit Components

1. Real-time PCR Master Mix, 2.5x
2. Hotstart Taq (5U/ μ l)
3. dNTP Mix, 10 mM each

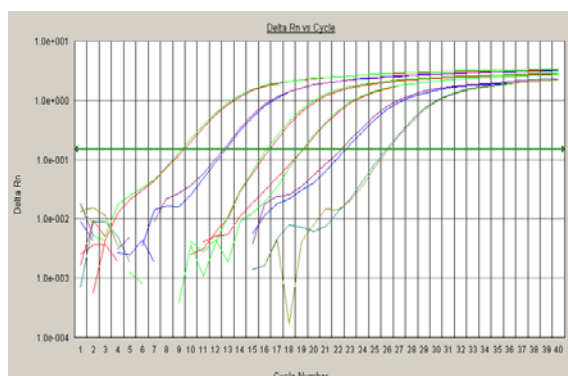

Storage

Store at -20°C.

Related Products

One step real-time RTPCR kit (PG- 30010).

Amplification plot

Standard curve

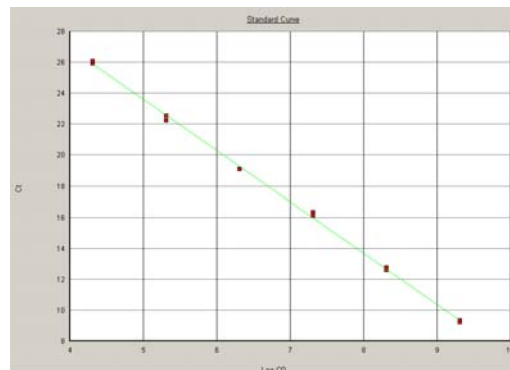

Table 1. Reaction components for real-time PCR

Component	Volume/reaction	Final concentration
Water	Variable	-
2.5x Real-time PCR Master Mix	10 μ l	1x
Hotstart Taq (5U/ μ l)	0.3 μ l	1.5U
dNTP Mix, 10 mM each	0.5 μ l	200 μ M
Forward primer	Variable	300 nM
Reverse primer	Variable	300 nM
Probe	Variable	100~200 nM
Template DNA	Variable	-
Total volume	25 μl	

Table 2. Thermal cycler conditions:

		Additional comments
Initial PCR activation step:	3 min 95°C	Hot Start DNA Polymerase is activated by this heating step.
2-step cycling:		
Denaturation:	15 sec 94°C	
Annealing/ Extension:	1 min 60°C	
Number of cycles:	40-45	The cycle number is dependent on the amount of template DNA
Soak	4°C	

FOR RESEARCH USE ONLY AND NOT INTENDED FOR DIAGNOSTIC OR THERAPEUTIC USE
