One step RT-PCR Kit

Catalog No. PG-30010

Quantity: 50 reactions

Reaction volume: 50 ul/reaction

Application

1. Cloning
2. Assess gene expression level
3. RNA virus detection

Kit Components

1. One Step RT-PCR Master Mix, 2x
 2. One Step RT-PCR Enzyme Mix, 50x
- (Including Reverse Transcriptase and Hot Start DNA Polymerase)
3. dNTP Mix, 10 mM each
 4. Nuclease-free water

Storage

Store at -20°C.

Related Products

Real-time PCR kit (PG- 30009)

One step real-time RTPCR kit (PG- 30017).

Table 1. Reaction components for One step RTPCR

Component	Volume/reaction	Final concentration
PCR Mix:		
Nuclease-free water (provided)	Variable	-
2x One Step RT-PCR Master Mix	25 µl	1x
50x One Step RT-PCR Enzyme Mix	1 µl	1x
dNTP Mix, 10 mM each	1 µl	200 µM
Forward primer	Variable	-
Reverse primer	Variable	-
RNase inhibitor (optional)	Variable	5-10 units
Template RNA	Variable	-
Total volume	50 µl	

Table 2. Thermal cycler conditions:

			Additional comments
Reverse transcription:	30 min	50°C	A reverse-transcription reaction temperature of 50°C is recommended. However, if satisfactory results are not obtained using 50°C, the reaction temperature may be increased up to 60°C
Initial PCR activation step:	2 min	95°C	Hot Start DNA Polymerase is activated by this heating step.
3-step cycling:			
Denaturation:	0.5-1 min	94°C	
Annealing:	0.5-1 min	50-68°C	Approximately 5°C below T _m of primers.
Extension:	1 min	72°C	1 kb RT-PCR product needs approximately 1-1.5 min.

FOR RESEARCH USE ONLY AND NOT INTENDED FOR DIAGNOSTIC OR THERAPEUTIC USE
